

We ,Geoprotek Tech. Inc is mainly for Solar inverter, PV system monitoring devices and software. We are very glad to inform you that we create the new monitor data logger for Solar Inverter. For our product model we called that “GS logger , it can connect up to 50 inverters and monitor the data from Inverter. Also you can check the data via IE web browser.

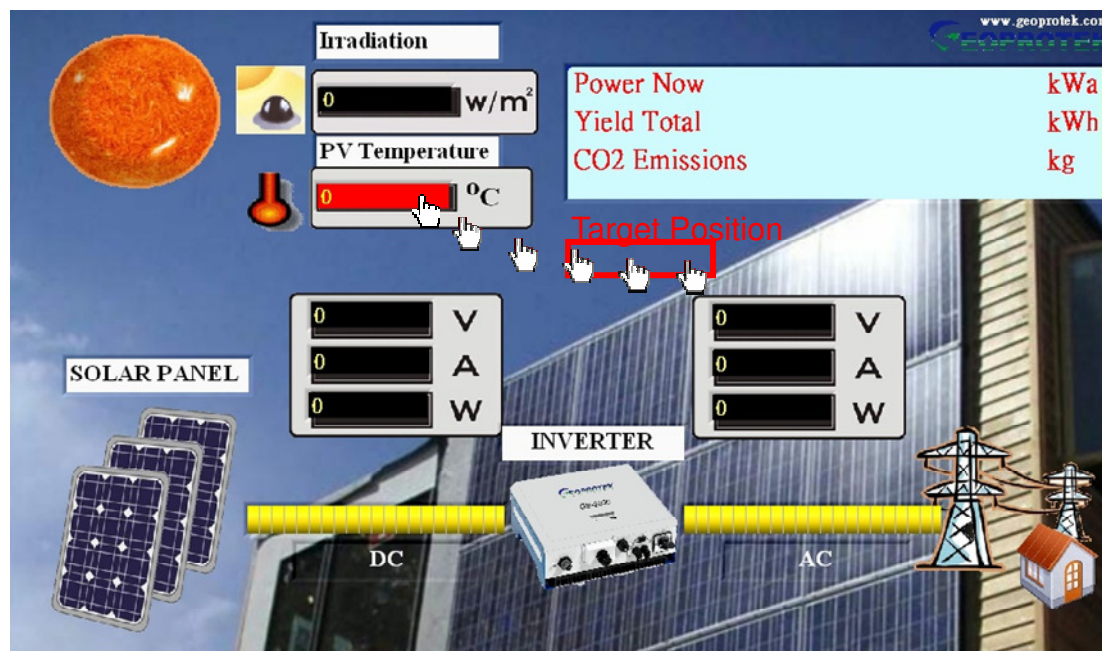

GS Logger is able to connect to GS Inverter directly via GS 485 Card. GS Control is the software install on GS Logger. The software can read Vpv(V), Ipv(A), Ppv(W), kWh, Temperature, Efficiency, Alarm Status, Fac,Zac...etc information from GS Inverter. GS Logger can connect to sensor box with Irradiation and Module Temperature measurement mapping to different inverters. As the alarm occurred, the software can send Email and GSM message automatically. Also, you can connect to a TFT LCD to display via VGA. If you need to remote monitoring the GS Logger data, you can browse via IE or GS Central can real time monitor all GS Logger through Ethernet connection remotely.

With a great flexibility, all the data on the screen can be defined the display position, format, color even the data source. So you can put the data indicators in where you want to be. The screen background image also can be changed, it support(.jpg, .bmp and .png). You can customize you favorite display situation and provide the customer best solution for PV system monitoring.

**Change Table Format and Data Source**

**Editable Data Indicator Position**

Besides, GEOPROTEK provide GS Solar Inverter with great performance and IP65 waterproof. All GS inverter products provide the certifications for CE and VDE UL and CSA.
