Seven Segment LED Display

GEOPROTEK provide different size and characters Seven Segment LED Display for demonstration board. System integrators can do the display board by themselves and embed with the seven segment LEDs. By this way, GS LOGGER could communicate with the LED via RS-485 and select the display value you want to display on the board. You need to check how many characters you need and how large the display you will apply on the display board. The following is the size and characters GEOPROTEK could provide.
